

Product Datasheet GenieFluor Red 780 Anti-Mouse F4/80 Antibody [CI:A3-1] Catalogue Code: AGEL3115

Antibody Data

Product SKU:	AGEL3115	Clone:	CI:A3-1	
Applications:	FCM			
Reactivity:	Mouse			

Important Note:

Centrifuge before opening to ensure complete recovery of vial contents.

Product Information:

Alternate Names: Uniprot ID:	Adhesion G protein-coupled receptor E1;Adgre1;Cell surface glycoprotein F4/80;EGF-like module receptor 1;Adgre1;Emr1; Gpf480; Q61549		
Background:	F4/80 is a 160 kD glycoprotein. It is characterized as a member of the epidermal growth factor (EGF)-transmembrane 7 (TM7) family. F4/80, also known as EMR1 or Ly71, has been widely used as a murine macrophage marker, which is expressed on the majority of tissue macrophages including peritoneal macrophages, macrophages in lung, gut, thymus and red pulp of spleen (but not on the macrophages located in T cell areas of the spleen, lymph node and Peyer's patch), Kuffer cells, Langerhans cells, and bone marrow stromal cells. F4/80 has also been shown on a subset of dendritic cells. The biological ligand of F4/80 has not been identified, but it has been reported that F4/80 is required for induction of CD8+ T cells-mediated peripheral tolerance.		
Form:	Liquid	'80 Excitation and Emission Spectra	
Conjugation:	Genie FluorRed 780	100	
Size:	25µg, 100µg	80 -	
Host Species:	Rat	S 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0	
Isotype:	Rat IgG2b, κ		
Isotype Control:	Genie Fluor Red 780 Rat IgG2b, κ Isotype Control[LTF-2] [Product AGEL3115]		

Storage Buffer: Phosphate buffered solution, pH 7.2, containing 0.09% stabilizer and 1% protein protectant.

Shipping: Biological ice pack at 4°C

- **Stability & Storage:** Keep as concentrated solution. Store at 2~8°C and protected from prolonged exposure to light. Do not freeze. Centrifuge before opening to ensure complete recovery of vial contents. This product is guaranteed up to one year from purchase.
- RecommendedEach lot of this antibody is quality control tested by flow cytometric analysis. Please check
your vial before the experiment. Since applications vary, the appropriate dilutions must be
determined for individual use. We suggest each investigator should titrate the reagent to
obtain optimal results [The recommended concentration is 0.1-1 μg/106 cells in 100 μL
volume].
