

CABE074

Product Information

Product SKU:	CABE074	Gene ID:	-	Size:	20uL, 100uL
Clone No:	-	Host Species:	Alpaca	Reactivity:	Species independent

Additional Information

Observed MW:	30kDa	Conjugate:	Agarose Beads
Calculated MW:	27kDa	Isotype:	VHH

Immunogen Information

Background: The green fluorescent protein (GFP) is a protein composed of 238 amino acid residues (26.9 kDa) that exhibits bright green fluorescence when exposed to light in the blue to ultraviolet range. Although many other marine organisms have similar green fluorescent proteins, GFP traditionally refers to the protein first isolated from the jellyfish *Aequorea victoria*. The GFP from *A. victoria* has a major excitation peak at a wavelength of 395 nm and a minor one at 475 nm. Its emission peak is at 509 nm, which is in the lower green portion of the visible spectrum. The GFP from the sea pansy (*Renilla reniformis*) has a single major excitation peak at 498 nm. GFP makes for an excellent tool in many forms of biology due to its ability to form internal chromophore without requiring any accessory cofactors, gene products, or enzymes / substrates other than molecular oxygen. In cell and molecular biology, the GFP gene is frequently used as a reporter of expression. It has been used in modified forms to make biosensors, and many animals have been created that express GFP, which demonstrates a proof of concept that a gene can be expressed throughout a given organism, in selected organs, or in cells of interest. GFP can be introduced into animals or other species through transgenic techniques, and maintained in their genome and that of their offspring. To date, GFP has been expressed in many species, including bacteria, yeasts, fungi, fish and mammals, including in human cells.

Recommended Dilution: IP, 30µl Anti-GFP (Nanobody) Agarose Beads antibody for 100µg extracts of recombinant protein; 500 µL (20 reactions) RIP, 500 µL (20 reactions) ChIP, 500 µL (20 reactions)

Synonyms: GFP; GFP tag; GFP-tag

Purification Method: Affinity purification

Immunogen: Recombinant protein of GFP.

Storage: Store at 4°C. Avoid freeze / thaw cycles. Buffer: 0.03% sodium azide, 20% ethanol
