AssayGenie

IVMB0527

Product Information							
Product SKU:	IVMB0527	Clone:	GA101	Target:	CD20		
Size:	50 µg			lsotype:	Human lgG1ĸ		
Additional In	formation						
Reactivity:	Human			Host Species	s : Human		
Antibody Type	e: Biosimilar Rec	Biosimilar Recombinant Human Monoclonal Antibody			Expression Host: HEK-293 Cells		

Immunogen Information

Background:CD20 is a nonglycosylated 33-37 kDa phosphoprotein member of the MS4A family which is
widely expressed on normal B cell surfaces during all stages of development as well as by
most B cell malignancies^{1,2}. The biological role of CD20 remains poorly understood;
however, it is thought to be involved in calcium ion influx. CD20 has no natural ligand and
is not immediately internalized upon antibody binding. Thus, mAbs directed against CD20
depend on the recruitment of a host response. Anti-CD20 mAbs bind to the 44 amino acid
extracellular portion.

Obinutuzumab (GA101) is a new generation, type II, anti-CD20 antibody². Obinutuzumab was humanized by grafting the complementarity-determining sequences of murine IgG1-κ antibody B-Ly1 onto human VH and VL acceptor frameworks³. The Fc segment was glycoengineered to attach bisected, complex, nonfucosylated oligosaccharides to asparagine 297, leading to increased affinity to FcgRIII.

Obinutuzumab causes homotypic adhesion^{4,5,6}, induces direct cell death via largely caspaseindependent mechanisms^{4,6,7,8,9}, does not localize into lipid rafts^{4,10,11}, displays half-maximal CD20 binding at saturating conditions⁷, and displays minimal complement dependent cytotoxicity⁷.

Product Concentration:	Compared to rituximab, obinutuzumab recognizes a distinct but overlapping CD20 epitope, in a different orientation that results in increased pro-apoptotic potential ^{12,13,14} . A modified elbow-hinge residue, characterized by a leucine to valine mutation at Kabat position 11, is key to superior phosphatidylserine exposure and cell death relative to rituximab ³ . 0.2 mg/ml
Applications:	ELISA
Synonyms:	Obinutuzumab, CD20, MS4A1
Antigen Distribution: Immunogen:	CD20 is a general B cell marker expressed by the majority of normal B cells in all stages of their development as well as by most B cell malignancies. Human lymphoblastoid cell line SB.
Formulation	This Allophycocyanin (APC) conjugate is formulated in 0.01 M phosphate buffered saline (150 mM NaCl) PBS pH 7.4, 1% BSA and 0.09% sodium azide as a preservative.
Specificity:	Obinutuzumab (GA101) activity is directed against human CD20.
Pathogen Testing:	-
Storage & Handling:	This Allophycocyanin (APC) conjugate is stable when stored at 2-8°C.Do not freeze.
