

## IVMB0533

Product Information							
Product SKU:	IVMB0533	Clone:	GA101	Target:	CD20		
Size:	100 µg			<b>Isotype</b> :	Human lgG1ĸ		
Additional In	formation						
Reactivity:	Human			Host Species	: Human		
Antibody Type	e: Biosimilar Re	Biosimilar Recombinant Human Monoclonal Antibody			ost: HEK-293 Cells		

## **Immunogen Information**

Background:CD20 is a nonglycosylated 33-37 kDa phosphoprotein member of the MS4A family which is<br/>widely expressed on normal B cell surfaces during all stages of development as well as by<br/>most B cell malignancies<sup>1,2</sup>. The biological role of CD20 remains poorly understood;<br/>however, it is thought to be involved in calcium ion influx. CD20 has no natural ligand and<br/>is not immediately internalized upon antibody binding. Thus, mAbs directed against CD20<br/>depend on the recruitment of a host response. Anti-CD20 mAbs bind to the 44 amino acid<br/>extracellular portion.

Obinutuzumab (GA101) is a new generation, type II, anti-CD20 antibody<sup>2</sup>. Obinutuzumab was humanized by grafting the complementarity-determining sequences of murine IgG1- $\kappa$  antibody B-Ly1 onto human VH and VL acceptor frameworks<sup>3</sup>. The Fc segment was glycoengineered to attach bisected, complex, nonfucosylated oligosaccharides to asparagine 297, leading to increased affinity to FcgRIII.

Obinutuzumab causes homotypic adhesion<sup>4,5,6</sup>, induces direct cell death via largely caspaseindependent mechanisms<sup>4,6,7,8,9</sup>, does not localize into lipid rafts<sup>4,10,11</sup>, displays half-maximal CD20 binding at saturating conditions<sup>7</sup>, and displays minimal complement dependent cytotoxicity<sup>7</sup>.

Product Concentration:	Compared to rituximab, obinutuzumab recognizes a distinct but overlapping CD20 epitope, in a different orientation that results in increased pro-apoptotic potential <sup>12,13,14</sup> . A modified elbow-hinge residue, characterized by a leucine to valine mutation at Kabat position 11, is key to superior phosphatidylserine exposure and cell death relative to rituximab <sup>3</sup> . 0.5 mg/ml
Applications:	ELISA
Synonyms:	Obinutuzumab, CD20, MS4A1
Antigen Distribution: Immunogen:	CD20 is a general B cell marker expressed by the majority of normal B cells in all stages of their development as well as by most B cell malignancies. Human lymphoblastoid cell line SB.
Formulation:	This Biotinylated antibody is formulated in 0.01 M phosphate buffered saline (150 mM NaCl) PBS pH 7.4, 1% BSA and 0.09% sodium azide as a preservative.
Specificity:	Obinutuzumab (GA101) activity is directed against human CD20.
Pathogen Testing:	-
Storage & Handling:	This biotinylated antibody is stable when stored at 2-8°C.Do not freeze.
