Product Information

Size: Protein Background:

50ul Protein arginine N-methyltransferase 2 is an enzyme that in humans is encoded by the

PRMT2 gene. Arginine methyltransferase that methylates the guanidino nitrogens of arginyl residues in proteins such as STAT3, FBL, histone H4. Acts as a coactivator (with

NCOA2) of the androgen receptor (AR)-mediated transactivation. Acts as a coactivator (with estrogen) of estrogen receptor (ER)-mediated transactivation. Enhances PGR,

PPARG, RARA-mediated transactivation. May inhibit NF-kappa-B transcription and

promote apoptosis. Represses E2F1 transcriptional activity (in a RB1-dependent

manner). May be involved in growth regulation.
