SLC2A4RG Antibody

PACO18892

Product Information	
Size:	Protein Background:
50ul	Receptor that mediates the recognition, internalization and degradation of oxidatively modified low density lipoprotein (oxLDL) by vascular endothelial cells. OxLDL is a marker of atherosclerosis that induces vascular endothelial cell activation and dysfunction, resulting in pro-inflammatory responses, pro-oxidative conditions and apoptosis. Its association with oxLDL induces the activation of NF-kappa-B through an increased production of intracellular reactive oxygen and a variety of pro-atherogenic cellular responses including a reduction of nitric oxide (NO) release, monocyte adhesion and apoptosis. In addition to binding oxLDL, it acts as a receptor for the HSP70 protein involved in antigen cross-presentation to naive T-cells in dendritic cells, thereby participating in cell-mediated antigen cross-presentation. Also involved in inflammatory process, by acting as a leukocyte-adhesion molecule at the vascular interface in endotoxin-induced inflammation. Gene ID: SLC2A4RG
Reactivity:	
Human	
Source:	
Rabbit	
lsotype:	
lgG	
Applications:	
ELISA, WB	
Recommended dilutions:	
ELISA:1:1000-1:5000, WB:1:200-1:1000	Uniprot
	Q9NR83
	Synonyms:
	SLC2A4 regulator
	Immunogen:
	Synthetic peptide of human SLC2A4RG.
	Storage:
	-20° C, pH7.4 PBS, 0.05% NaN3, 40% Glycerol

Gel: 10%SDS-PAGE, Lysate: 50 μ g, Lane: Human fetal kidney tissue, Primary antibody: PACO18892(SLC2A4RG Antibody) at dilution 1/250, Secondary antibody: Goat anti rabbit IgG at 1/8000 dilution, Exposure time: 1 hour.
