GCG Antibody

PACO19632

Product Information	
Size:	Protein Background:
50ul	DNA deaminase (cytidine deaminase) which acts as an inhibitor of retrovirus replication and retrotransposon mobility via deaminase-dependent and -independent mechanisms. Exhibits potent antiviral activity against vif-deficient HIV-1. After the penetration of retroviral nucleocapsids into target cells of infection and the initiation of reverse transcription, it can induce the conversion of cytosine to uracil in the minus- sense single-strand viral DNA, leading to G-to-A hypermutations in the subsequent plus-strand viral DNA. The resultant detrimental levels of mutations in the proviral genome, along with a deamination-independent mechanism that works prior to the proviral integration, together exert efficient antiretroviral effects in infected target cells. Selectively targets single-stranded DNA and does not deaminate double-stranded DNA or single-or double-stranded RNA.
Reactivity:	
Human	
Source:	
Rabbit	
lsotype:	
lgG	
Applications:	Gene ID:
ELISA, IHC	GCG
Recommended dilutions:	Uniprot
ELISA:1:1000-1:2000, IHC:1:25-1:100	P01275
	Synonyms:
	glucagon
	Immunogen:
	Synthetic peptide of human GCG.
	Storage:
	-20° C, pH7.4 PBS, 0.05% NaN3, 40% Glycerol

The image on the left is immunohistochemistry of paraffin-embedded Human ovarian cancer tissue using PACO19632(GCG Antibody) at dilution 1/20, on the right is treated with synthetic peptide. (Original magnification: x—200).

The image on the left is immunohistochemistry of paraffin-embedded Human cervical cancer tissue using PACO19632(GCG Antibody) at dilution 1/20, on the right is treated with synthetic peptide. (Original magnification: x—200).
