SSX4 Antibody

PACO20606

Product Information	
Size:	Protein Background:
50ul	Receptor tyrosine kinase that transduces signals from the extracellular matrix into the
Reactivity:	cytoplasm by binding growth factor GAS6 and which is thus regulating many physiological processes including cell survival, cell proliferation, migration and
Human	differentiation. Ligand binding at the cell surface induces dimerization and autophosphorylation of AXL. Following activation by ligand, ALX binds and induces
Source:	tyrosine phosphorylation of PI3-kinase subunits PIK3R1, PIK3R2 and PIK3R3; but also
Rabbit	GRB2, PLCG1, LCK and PTPN11. Other downstream substrate candidates for AXL are CBL, NCK2, SOCS1 and TNS2. Recruitment of GRB2 and phosphatidylinositol 3 kinase
lsotype:	regulatory subunits by AXL leads to the downstream activation of the AKT kinase.
