ABCC8 Antibody

PACO20626

Product Information	
Size:	Protein Background:
50ul	Secreted glycoprotein regulating the activation of different signaling pathways in adjacent cells to control different processes including cell adhesion, cell-matrix adhesion, cytoskeleton organization and cell migration. Promotes substrate adhesion, spreading and formation of focal contacts. Negatively regulates cell-matrix adhesion and stress fiber assembly through Rho protein signal transduction. Modulates the organization of actin cytoskeleton by stimulating the formation of stress fibers through interactions with components of Wnt signaling pathways. Promotes cell migration through activation of PTK2 and the downstream phosphatidylinositol 3-kinase signaling. Plays a role in bone formation and promotes osteoblast differentiation in a dose-dependent manner through mitogen-activated protein kinase signaling. Mediates myelination in the peripheral nervous system through ERBB2/ERBB3 signaling. Plays a role as a regulator of muscle hypertrophy through the components of dystrophin- associated protein complex.
Reactivity:	
Human, Rat	
Source:	
Rabbit	
lsotype:	
lgG	
Applications:	
Elisa, IHC	Gene ID:
Recommended dilutions:	ABCC8
ELISA:1:2000-1:5000, IHC:1:35-1:150	Uniprot
	Q09428
	Synonyms:
	ATP-binding cassette, sub-family C (CFTR/MRP), member 8
	Immunogen:
	Synthetic peptide of human ABCC8.
	Storage:

-20° C, pH7.4 PBS, 0.05% NaN3, 40% Glycerol

The image on the left is immunohistochemistry of paraffin-embedded Human esophagus cancer tissue using PACO20626(ABCC8 Antibody) at dilution 1/40, on the right is treated with synthetic peptide. (Original magnification: x—200).

The image on the left is immunohistochemistry of paraffin-embedded Human breast cancer tissue using PACO20626(ABCC8 Antibody) at dilution 1/40, on the right is treated with synthetic peptide. (Original magnification: x—200).
