## **TSPY1** Antibody

## PACO20782

Product Information	
Size:	Protein Background:
50ul	As a component of the LINC (LInker of Nucleoskeleton and Cytoskeleton) complex, involved in the connection between the nuclear lamina and the cytoskeleton. The nucleocytoplasmic interactions established by the LINC complex play an important role in the transmission of mechanical forces across the nuclear envelope and in nuclear movement and positioning. Specifically, SYNE2 and SUN2 assemble in arrays of transmembrane actin-associated nuclear (TAN) lines which are bound to F-actin cables and couple the nucleus to retrograde actin flow during actin-dependent nuclear movement. Required for interkinetic nuclear migration (INM) and essential for nucleokinesis and centrosome-nucleus coupling during radial neuronal migration in the cerebral cortex and during glial migration. Required for nuclear migration in retinal photoreceptor progenitors implicating association with cytoplasmic dynein-dynactin and kinesin motor complexes, and probably B-type lamins; SUN1 and SUN2 seem to act redundantly.
Reactivity:	
Human	
Source:	
Rabbit	
lsotype:	
lgG	
Applications:	
Elisa, ihc	Gene ID:
Recommended dilutions:	TSPY1
ELISA:1:2000-1:10000, IHC:1:30-1:150	Uniprot
	Q540R4
	Synonyms:
	testis specific protein, Y-linked 1
	Immunogen:
	Synthetic peptide of human TSPY1.
	Storage:

-20° C, pH7.4 PBS, 0.05% NaN3, 40% Glycerol

The image on the left is immunohistochemistry of paraffin-embedded Human esophagus cancer tissue using PACO20782(TSPY1 Antibody) at dilution 1/40, on the right is treated with synthetic peptide. (Original magnification: x—200).
