Recommended dilutions:**Protein Background:**

Exhibits PLA1/2 activity, catalyzing the calcium-independent hydrolysis of acyl groups in various phosphatidylcholines (PC) and phosphatidylethanolamine (PE). For most substrates, PLA1 activity is much higher than PLA2 activity. Specifically catalyzes the release of fatty acid, from phospholipids in adipose tissue. N- and O-acylation activity is hardly detectable. Might decrease protein phosphatase 2A (PP2A) activity.
