F9 Antibody, FITC conjugated

PACO48332

Product Information	
Size:	Protein Background:
50ug	Factor IX is a vitamin K-dependent plasma protein that participates in the intrinsic
Reactivity:	pathway of blood coagulation by converting factor X to its active form in the presence of Ca(2+) ions, phospholipids, and factor VIIIa.
Human	Gene ID:
Source:	F9
Rabbit	Uniprot
lsotype:	P00740
lgG	Synonyms:
Applications:	Coagulation factor IX (EC 3.4.21.22) (Christmas factor) (Plasma thromboplastin
ELISA	component) (PTC) [Cleaved into: Coagulation factor IXa light chain; Coagulation factor IXa heavy chain], F9
Recommended dilutions:	Immunogen:
	Recombinant Human Coagulation factor IX protein (144-239AA).
	Storage:

Preservative: 0.03% Proclin 300. Constituents: 50% Glycerol, 0.01M PBS, PH 7.4
