Product Information

Size: Protein Background:

50ug Intracellular channel that mediates calcium release from the endoplasmic reticulum

following stimulation by inositol 1,4,5-trisphosphate. Involved in the regulation of epithelial secretion of electrolytes and fluid through the interaction with AHCYL1. Plays

a role in ER stress-induced apoptosis. Cytoplasmic calcium released from the ER

triggers apoptosis by the activation of CaM kinase II, eventually leading to the

activation of downstream apoptosis pathways.
