Recommended dilutions:**Protein Background:**

Putative adhesion molecule that mediates sialic-acid, dependent binding to cells. Preferentially binds to alpha-2,3- or alpha-2,6-linked sialic acid, The sialic acid, recognition site may be masked by cis interactions with sialic acid, on the same cell surface. In the immune response, may act as an inhibitory receptor upon ligand induced tyrosine phosphorylation by recruiting cytoplasmic phosphatase(s) via their SH2 domain(s) that block signal transduction through dephosphorylation of signaling molecules.
