Crotonyl-HIST1H4A (K12) Antibody

PACO58644

Reactivity:

Human

Product Information

Recommended dilutions:

Size: **Protein Background:**

50ul Core component of nucleosome. Nucleosomes wrap and compact DNA into chromatin,

> limiting DNA accessibility to the cellular machineries which require DNA as a template. Histones thereby play a central role in transcription regulation, DNA repair, DNA

replication and chromosomal stability. DNA accessibility is regulated via a complex set

of post-translational modifications of histones, also called histone code, and

Source: nucleosome remodeling.

Rabbit Gene ID:

Western Blot. Positive WB detected in: Hela whole cell lysate, Jurkat whole cell lysate, 293 whole cell lysate, HepG2 whole cell lysate (treated by 30mM sodium crotonylate for 4h). All lanes: HIST1H4A antibody at 0.15µg/ml. Secondary. Goat polyclonal to rabbit lgG at 1/50000 dilution. Predicted band size: 12 kDa. Observed band size: 12 kDa.

Immunofluorescence staining of Hela cells (treated with 30mM sodium crotonylate for 4h) with PACO58644 at 1:5, counter-stained with DAPI. The cells were fixed in 4% formaldehyde, permeabilized using 0.2% Triton X-100 and blocked in 10% normal Goat Serum. The cells were then incubated with the antibody overnight at 4°C. The secondary antibody was Alexa Fluor 488-congugated AffiniPure Goat Anti-Rabbit IgG(H+L).
