Product Information

Size: Protein Background:

50ul Regulates the translocation of phosphorylated SRC to peripheral cell-matrix adhesion

sites. Required for proper architecture of actin filaments. Inhibits the Wnt/beta-catenin signaling pathway, probably by recruiting CTNNB1 to recycling endosomes and hence

preventing its translocation to the nucleus. Participates in angiogenesis. May play a role in the polarity, proliferation and migration of endothelial cells. Selectively promotes

Source: FGF-induced MAPK activation through SRC.
