

Biosimilar Antibodies

240 Biosimilar Reference Antibodies in Standard, Functional-Grade Low Endotoxin & Fc Mutated Formats

REFERENCE BIOSIMILARS

Validated reference biosimilars for therapeutic antibody R&D in Immuno-Oncology, Immunotherapy & autoimmune disease

VALIDATED

Extensive bioassay validation performed to ensure quality and specificity

CUTTING EDGE

Highly pure reference Biosimilars for cell culture, PK assays, flow cytometry, ELISA, IHC, WB and in vivo animal studies

LOW ENDOTOXIN & FC MUTATED

Low Endotoxin formats for in vivo animal studies with Fc Mutated Biosimilars for reduced background

Human CD47, mFc-His Tagged protein ELISA
0.2 µg of Human CD47, mFc-His tagged protein per well

Figure 1: ELISA plate was precoated with 2 µg/ml Human CD47. Anti-CD47 (Magrolimab) biosimilar binds to Human CD-47 and can be detected in a range of 0.061-1.606 ng/ml using a mFc-His tagged protein.

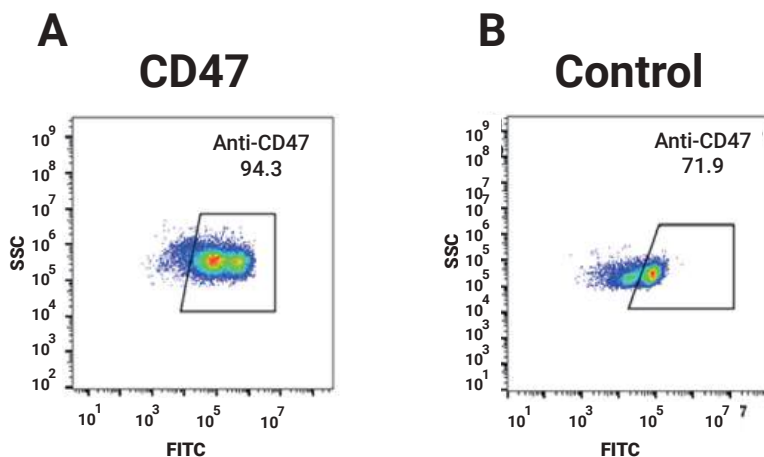

Figure 2: HEK293 cells were transfected with (A) human CD47 or (B) control protein. Cells were then stained with anti-CD47 neutralising antibody (magrolimab), which highlights specificity.

In Vivo Biosims | Extensive Bioanalytical Validation

Antibodies and isotypes tested

Independent comparison of the in vivo efficacy and tolerability of clones of mAbs anti-PD-1 [RMP1-14 and 29F.1A12], anti-PD-L1 [10F.9G2], and anti-CTLA-4 [9H10] and isotype controls versus Vendor B using a CT26 syngeneic model (murine colorectal carcinoma derived from BALB/c mice). All antibodies had matching isotype controls, and phosphate-buffered saline (PBS) was used as a control.

A: Endotoxin analysis

B: Chromatographic analysis

C: Non-reducing

D: Reducing

Figure 1. Quality control for different lots of PD-1 [RMP1-14] antibody. All the in vivo antibodies undergo extensive quality control ensuring extreme lot-to-lot reproducibility.

Endotoxin data for eight lots demonstrate that all lots were below the specification of ≤ 0.5 EU/mg as determined by the limulus amoebocyte lysate (LAL) method (Fig. 1A).

Analysis by size exclusion chromatography visualized by superimposing chromatograms for all nine lots, with overlapping retention times and minimal baseline noise (Fig. 1B).

All lots show high purity as shown by non-reducing and reducing SDS-PAGE (Fig. 1C and 1D).
