Protein Information

Background:	This gene encodes a G protein-coupled receptor (GPCR) that belongs to the
	oxoglutarate receptor family within the GPCR superfamily. The encoded protein is
	activated by the citric acid intermediate, oxoglutarate, as well as several cysteinyl
	leukotrienes, including leukotrienes E4, C4 and D4, which are implicated in many
	inflammatory disorders. In mice, a knock-out of this gene leads to middle ear
	inflammation, changes in the mucosal epithelium, and an increase in fluid behind the
	eardrum, and is associated with hearing loss. Alternative splicing results in multiple
	transcript variants. [provided by RefSeq, Oct 2016]

Protein Description :	Human OXGR1-Strep full length protein-synthetic nanodisc
Formulation:	Lyophilized from nanodisc solubilization buffer (20 mM Tris-HCl, 150 mM NaCl, pH
	8.0). Normally 5% – 8% trehalose is added as protectants before lyophilization. Please
	see Certificate of Analysis for specific instructions. Do not use solvents with a pH
	below 6.5 or those containing high concentrations of divalent metal ions (greater
	than 5 mM) in subsequent experiments.
Protein Pathways :	-
Protein Families:	GPCR, Transmembrane, Druggable Genome.
Usage:	Research use only

Storage & Shipping: Store at -20°C to -80°C for 12 months in lyophilized form. After reconstitution, if not intended for use within a month, aliquot and store at -80°C (Avoid repeated freezing and thawing). Lyophilized proteins are shipped at ambient temperature.
