Nanodisc Human PTAFR-Strep Protein

HDFP1173

Product Information

Product SKU: HDFP1173 Expression Host: HEK293 Size: 10μg

Target: PTAFR **Tag**: C-Flag&Strep Tag

Additional Information

Conjugate: Unconjugated **Uniprot ID**: P25105

Molecular Weight: The human full length PTAFR-Strep protein has a MW of 39.2 kDa

Protein Information

Background: This gene encodes a seven-transmembrane G-protein-coupled receptor for platelet-

activating factor (PAF) that localizes to lipid rafts and/or caveolae in the cell

membrane. PAF (1-0-alkyl-2-acetyl-sn-glycero-3-phosphorylcholine) is a

phospholipid that plays a significant role in oncogenic transformation, tumor growth,

angiogenesis, metastasis, and pro-inflammatory processes. Binding of PAF to the

PAF-receptor (PAFR) stimulates numerous signal transduction pathways including

phospholipase C, D, A2, mitogen-activated protein kinases (MAPKs), and the

phosphatidylinositol-calcium second messenger system. Following PAFR activation,

cells become rapidly desensitized and this refractory state is dependent on PAFR

phosphorylation, internalization, and down-regulation. Alternative splicing results in

multiple transcript variants. [provided by RefSeq, Aug 2011]

Synonyms: PAFR

Protein Description: Human PTAFR-Strep full length protein-synthetic nanodisc

Formulation: Lyophilized from nanodisc solubilization buffer (20 mM Tris-HCl, 150 mM NaCl, pH

8.0). Normally 5% – 8% trehalose is added as protectants before lyophilization. Please

see Certificate of Analysis for specific instructions. Do not use solvents with a pH

below 6.5 or those containing high concentrations of divalent metal ions (greater

than 5 mM) in subsequent experiments.

Protein Pathways: GPCRDB Class A Rhodopsin-like, Small ligand GPCRs, Apoptosis, Cancer.

Protein Families: GPCR, Transmembrane, Druggable Genome.

Usage: Research use only

Storage & Shipping: Store at -20°C to -80°C for 12 months in lyophilized form. After reconstitution, if not

intended for use within a month, aliquot and store at -80°C (Avoid repeated freezing

and thawing). Lyophilized proteins are shipped at ambient temperature.
