Protein Information

Background: A member of a family of multipass membrane proteins that functions as calcium

channels. The encoded protein contains N-terminal ankyrin repeats, which are

required for channel assembly and regulation. Translation initiation for this protein

occurs at a non-AUG start codon that is decoded as methionine. This gene is situated

next to a closely related gene for transient receptor potential cation channel

subfamily V member 5 (TRPV5). This locus has experienced positive selection in non-

African populations, resulting in several non-synonymous codon differences among

individuals of different genetic backgrounds.

Synonyms: ABP/ZF; CAT1; CATL; ECAC2; HRPTTN; HSA277909; LP6728; ZFAB
