Nanodisc Human CLIC4-Strep Protein

HDFP1293

Product Information

Product SKU: HDFP1293 Expression Host: HEK293 Size: 10μg

Target: CLIC4 **Tag**: C-Flag&Strep Tag

Additional Information

Conjugate: Unconjugated Uniprot ID: Q9Y696

Molecular Weight: The human full length CLIC4-Strep protein has a MW of 28.8 kDa

Protein Information

Background: Chloride channels are a diverse group of proteins that regulate fundamental cellular

processes including stabilization of cell membrane potential, transepithelial

transport, maintenance of intracellular pH, and regulation of cell volume. Chloride

intracellular channel 4 (CLIC4) protein, encoded by the CLIC4 gene, is a member of

the p64 family; the gene is expressed in many tissues and exhibits a intracellular

vesicular pattern in Panc-1 cells (pancreatic cancer cells). [provided by RefSeq, Jul

2008]

Synonyms: CLIC4L, H1, MTCLIC, huH1, p64H1

Protein Description: Human CLIC4-Strep full length protein-synthetic nanodisc

Formulation: Lyophilized from nanodisc solubilization buffer (20 mM Tris-HCl, 150 mM NaCl, pH

8.0). Normally 5% - 8% trehalose is added as protectants before lyophilization. Please

see Certificate of Analysis for specific instructions. Do not use solvents with a pH

below 6.5 or those containing high concentrations of divalent metal ions (greater

than 5 mM) in subsequent experiments.

Protein Pathways: -

Protein Families: Ion Channels: Other.

Usage: Research use only

Storage & Shipping:

Store at -20°C to -80°C for 12 months in lyophilized form. After reconstitution, if not intended for use within a month, aliquot and store at -80°C (Avoid repeated freezing and thawing). Lyophilized proteins are shipped at ambient temperature.
