Nanodisc Human CCG6-Strep Protein

HDFP1317

Product Information

Product SKU: HDFP1317 Expression Host: HEK293 Size: 10μg

Target: CCG6 **Tag**: C-Flag&Strep Tag

Additional Information

Conjugate: Unconjugated **Uniprot ID**: Q9BXT2

Molecular Weight: The human full length CCG6-Strep protein has a MW of 28.1 kDa

Protein Information

Background: Voltage-dependent calcium channels are composed of five subunits. The protein

encoded by this gene represents one of these subunits, gamma, and is one of two

known gamma subunit proteins. This particular gamma subunit is an integral

membrane protein that is thought to stabilize the calcium channel in an inactive

(closed) state. This gene is part of a functionally diverse eight-member protein

subfamily of the PMP-22/EMP/MP20 family and is located in a cluster with two family

members that function as transmembrane AMPA receptor regulatory proteins

(TARPs). Alternative splicing results in multiple transcript variants. Variants in this gene

have been associated with aspirin-intolerant asthma. [provided by RefSeq, Dec 2010]

Synonyms: -

Protein Description: Human CCG6-Strep full length protein-synthetic nanodisc

Formulation: Lyophilized from nanodisc solubilization buffer (20 mM Tris-HCl, 150 mM NaCl, pH

8.0). Normally 5% - 8% trehalose is added as protectants before lyophilization. Please

see Certificate of Analysis for specific instructions. Do not use solvents with a pH

below 6.5 or those containing high concentrations of divalent metal ions (greater

than 5 mM) in subsequent experiments.

Protein Pathways: -

Protein Families: Ion Channels: Other.

Usage: Research use only

Storage & Shipping:

Store at -20°C to -80°C for 12 months in lyophilized form. After reconstitution, if not intended for use within a month, aliquot and store at -80°C (Avoid repeated freezing and thawing). Lyophilized proteins are shipped at ambient temperature.
