Nanodisc Human TRPM2-Strep Protein

HDFP1385

Product Information

Product SKU: HDFP1385 Expression Host: HEK293 Size: 10μg

Target: TRPM2 Tag: C-Flag&Strep Tag

Additional Information

Conjugate: Unconjugated **Uniprot ID**: O94759

Molecular Weight: The human full length TRPM2-Strep protein has a MW of 171.2 kDa

Protein Information

Background: The protein encoded by this gene forms a tetrameric cation channel that is permeable

to calcium, sodium, and potassium and is regulated by free intracellular ADP-ribose.

The encoded protein is activated by oxidative stress and confers susceptibility to cell

death. Alternative splicing results in multiple transcript variants encoding distinct

protein isoforms. Additional transcript variants of this gene have been described, but

their full-length nature is not known. [provided by RefSeq, Feb 2016]

Synonyms: EREG1, KNP3, LTRPC2, LTrpC-2, NUDT9H, NUDT9L1, TRPC7

Protein Description: Human TRPM2-Strep full length protein-synthetic nanodisc

Formulation: Lyophilized from nanodisc solubilization buffer (20 mM Tris-HCl, 150 mM NaCl, pH

8.0). Normally 5% - 8% trehalose is added as protectants before lyophilization. Please

see Certificate of Analysis for specific instructions. Do not use solvents with a pH

below 6.5 or those containing high concentrations of divalent metal ions (greater

than 5 mM) in subsequent experiments.

Protein Pathways: -

Protein Families: Ion Channels: Transient receptor potential.

Usage: Research use only

Storage & Shipping:

Store at -20°C to -80°C for 12 months in lyophilized form. After reconstitution, if not intended for use within a month, aliquot and store at -80°C (Avoid repeated freezing and thawing). Lyophilized proteins are shipped at ambient temperature.
