Nanodisc Human GBRD-Strep Protein

HDFP1432

Product Information

Product SKU: HDFP1432 Expression Host: HEK293 Size: 10μg

Target: GBRD **Tag**: C-Flag&Strep Tag

Additional Information

Conjugate: Unconjugated **Uniprot ID**: O14764

Molecular Weight: The human full length GBRD-Strep protein has a MW of 50.7 kDa

Protein Information

Background: Gamma-aminobutyric acid (GABA) is the major inhibitory neurotransmitter in the

mammalian brain where it acts at GABA-A receptors, which are ligand-gated chloride

channels. Chloride conductance of these channels can be modulated by agents such

as benzodiazepines that bind to the GABA-A receptor. The GABA-A receptor is

generally pentameric and there are five types of subunits: alpha, beta, gamma, delta,

and rho. This gene encodes the delta subunit. Mutations in this gene have been

associated with susceptibility to generalized epilepsy with febrile seizures, type 5.

Alternatively spliced transcript variants have been described for this gene, but their

biological validity has not been determined. [provided by RefSeq, Jul 2008]

Synonyms: EIG10, EJM7, GEFSP5

Protein Description: Human GBRD-Strep full length protein-synthetic nanodisc

Formulation: Lyophilized from nanodisc solubilization buffer (20 mM Tris-HCl, 150 mM NaCl, pH

8.0). Normally 5% - 8% trehalose is added as protectants before lyophilization. Please

see Certificate of Analysis for specific instructions. Do not use solvents with a pH

below 6.5 or those containing high concentrations of divalent metal ions (greater

than 5 mM) in subsequent experiments.

Protein Pathways: -

Protein Families: Ion Channels: Cys-loop Receptors.

Usage: Research use only

Storage & Shipping:

Store at -20°C to -80°C for 12 months in lyophilized form. After reconstitution, if not intended for use within a month, aliquot and store at -80°C (Avoid repeated freezing and thawing). Lyophilized proteins are shipped at ambient temperature.
