Nanodisc Human ADA2C Protein

HDFP179

Product Information

Product SKU: HDFP179 Expression Host: HEK293 Size: 10μg

Target: ADA2C Tag: C-Flag Tag

Additional Information

Conjugate: Unconjugated Uniprot ID: P18825

Molecular Weight: The human full length ADA2C protein has a MW of 49.5kDa

Protein Information

Background: Alpha-2-adrenergic receptors are members of the G protein-coupled receptor

superfamily. They include 3 highly homologous subtypes: alpha2A, alpha2B, and

alpha2C. These receptors have a critical role in regulating neurotransmitter release

from sympathetic nerves and from adrenergic neurons in the central nervous system.

The mouse studies revealed that both the alpha2A and alpha2C subtypes were

required for normal presynaptic control of transmitter release from sympathetic

nerves in the heart and from central noradrenergic neurons. The alpha2A subtype

inhibited transmitter release at high stimulation frequencies, whereas the alpha2C

subtype modulated neurotransmission at lower levels of nerve activity. This gene

encodes the alpha2C subtype, which contains no introns in either its coding or

untranslated sequences. [provided by RefSeq, Jul 2008]

Synonyms: ADRA2L2, ADRA2RL2, ADRARL2, ALPHA2CAR

Protein Description: Human ADA2C full length protein-synthetic nanodisc

Formulation: Lyophilized from nanodisc solubilization buffer (20 mM Tris-HCl, 150 mM NaCl, pH

8.0). Normally 5% – 8% trehalose is added as protectants before lyophilization. Please

see Certificate of Analysis for specific instructions. Do not use solvents with a pH

below 6.5 or those containing high concentrations of divalent metal ions (greater

than 5 mM) in subsequent experiments.

Protein Pathways: GPCRDB Class A Rhodopsin-like, Monoamine GPCRs.

Protein Families: GPCR, Transmembrane, Druggable Genome.

Usage: Research use only

Storage & Shipping: Store at -20°C to -80°C for 12 months in lyophilized form. After reconstitution, if not

intended for use within a month, aliquot and store at -80°C (Avoid repeated freezing

and thawing). Lyophilized proteins are shipped at ambient temperature.
