Nanodisc Human KCNE1 Protein

HDFP545

Product Information

Product SKU: HDFP545 Expression Host: HEK293 Size: 10μg

Target: KCNE1 Tag: C-Flag Tag

Additional Information

Conjugate: Unconjugated **Uniprot ID**: P15382

Molecular Weight: The human full length KCNE1 protein has a MW of 14.7kDa

Protein Information

Background: The product of this gene belongs to the potassium channel KCNE family. Potassium

ion channels are essential to many cellular functions and show a high degree of

diversity, varying in their electrophysiologic and pharmacologic properties. This gene

encodes a transmembrane protein known to associate with the product of the

KVLQT1 gene to form the delayed rectifier potassium channel. Mutation in this gene

are associated with both Jervell and Lange-Nielsen and Romano-Ward forms of long-

QT syndrome. Alternatively spliced transcript variants encoding the same protein

have been identified. [provided by RefSeq, Jul 2008]

Synonyms: ISK, JLNS, JLNS2, LQT2/5, LQT5, MinK

Protein Description: Human KCNE1 full length protein-synthetic nanodisc

Formulation: Lyophilized from nanodisc solubilization buffer (20 mM Tris-HCl, 150 mM NaCl, pH

8.0). Normally 5% - 8% trehalose is added as protectants before lyophilization. Please

see Certificate of Analysis for specific instructions. Do not use solvents with a pH

below 6.5 or those containing high concentrations of divalent metal ions (greater

than 5 mM) in subsequent experiments.

Protein Pathways: -

Protein Families: Ion Channels: Other.

Usage: Research use only

Storage & Shipping:

Store at -20°C to -80°C for 12 months in lyophilized form. After reconstitution, if not intended for use within a month, aliquot and store at -80°C (Avoid repeated freezing and thawing). Lyophilized proteins are shipped at ambient temperature.
