## Nanodisc Human OR2B3-Strep Protein

## **HDFP886**

## **Product Information**

Product SKU:	HDFP886	Expression Host:	HEK293		Size:	10µg	
Target:	OR2B3	Tag:	C-Flag&St	rep Tag			
Additional Information							
<b>Conjugate</b> :	Unconjugat	ed <b>Unip</b>	orot ID:	O76000			
Molecular Wei	ght: The human	The human full length OR2B3-Strep protein has a MW of 35.5 kDa					

## **Protein Information**

Background:	Olfactory receptors interact with odorant molecules in the nose, to initiate a neuronal			
	response that triggers the perception of a smell. The olfactory receptor proteins are			
	members of a large family of G-protein-coupled receptors (GPCR) arising from single			
	coding-exon genes. Olfactory receptors share a 7-transmembrane domain structure			
	with many neurotransmitter and hormone receptors and are responsible for the			
	recognition and G protein-mediated transduction of odorant signals. The olfactory			
	receptor gene family is the largest in the genome. The nomenclature assigned to the			
	olfactory receptor genes and proteins for this organism is independent of other			
	organisms.			
Synonyms:	6M1-1; OR2B3P; OR6-4; OR6-14			
<b>Protein Description</b> :	Human OR2B3-Strep full length protein-synthetic nanodisc			
Formulation:	Lyophilized from nanodisc solubilization buffer (20 mM Tris-HCl, 150 mM NaCl, pH			
	8.0). Normally 5% – 8% trehalose is added as protectants before lyophilization. Please			
	see Certificate of Analysis for specific instructions. Do not use solvents with a pH			
	below 6.5 or those containing high concentrations of divalent metal ions (greater			
	than 5 mM) in subsequent experiments.			
Protein Pathways:	Olfactory transduction.			
Protein Families:	Transmembrane.			
Usage:	Research use only			

**Storage & Shipping**: Store at -20°C to -80°C for 12 months in lyophilized form. After reconstitution, if not intended for use within a month, aliquot and store at -80°C (Avoid repeated freezing and thawing). Lyophilized proteins are shipped at ambient temperature.
