Protein Information

Background:	Cell surface heparan sulfate proteoglycans are composed of a membrane-associated		
	protein core substituted with a variable number of heparan sulfate chains. Members		
	of the glypican-related integral membrane proteoglycan family (GRIPS) contain a		
	core protein anchored to the cytoplasmic membrane via a glycosyl		
	phosphatidylinositol linkage. These proteins may play a role in the control of cell		
	division and growth regulation.		

Protein Description:High quality, high purity and low endotoxin recombinant Recombinant Human
Glypican-1/GPC1 Protein, tested reactivity in HEK293 cells and has been validated in
